

## BPT 320 KB/R - Identification of correct electrical spare parts

- 1 320 KB with bottom plate made from steel resp. round cover of power connector

Due to their age it is often impossible to seal them correctly. Therefore we do not offer spare parts any more. The focus is on preventing personal injuries.  
Whenever needed a defective unit can be returned to our factory to proof whether a repair is possible or not.

- 2    **320 KB/R with injection molded bottom plate with injection point in the middle (colours blue and grey)**

### Available repair kits
